Summary

Software engineer with 1 year of experience shipping mobile, backend, and AI features in TypeScript, Python, and React Native. Strongest in payments, real-time and location-aware workflows, REST API integration, and LLM retrieval, plus hackathon wins and open-source work.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C++ | **Core CS**: OOP, Data Structures & Algorithms, Software Engineering
Backend: Node.js, Express.js, Flask, Django, REST APIs, WebSockets, JWT | **Databases**: PostgreSQL, MongoDB, Firebase, Redis
Frontend & Mobile: React Native, React.js, Next.js, Zustand, HTML, CSS
AI/ML: LLMs, RAG Pipelines, Embeddings, FAISS, LangChain, Prompt Engineering, Gemini API
Tools & Platforms: Git, GitHub Actions, Linux, Playwright, Browserbase, Swagger, Docker, Postman

Experience

Aforro — Bengaluru

Junior Mobile Application Developer — *Jul 2026 – Present*

- Delivered **6 rider order flows** (pickup, delivery, returns, replacements, cancellations, cash collection) via REST APIs, with **real-time** Firebase FCM/WebSocket alerts for **4 assignment flows** (delivery, return, replacement, assistant-rider), status updates, cash deposits, live location.
- Shipped rider operations with backend APIs: **9-step onboarding** before first shift, COD collection, UPI QR generation, wallet/earnings, shift management, and a **100 m geofence** gating "I've Arrived" (fused-location tracking, background geofencing, Google Maps routing).
- Owned the Sales app frontend end-to-end across **10 feature areas** (authentication, Cashfree payments, eSign, GSTIN, document uploads, surveys, store logging, WebView PDF rendering, store visits, check-ins), allowing check-ins only within **50 m** of a store.

React Native Intern — *Apr 2026 – Jul 2026*

- Integrated **40+ REST APIs** across **9 Customer app modules** (cart, orders, payments, refunds, wallet, profile, catalog, coupons, addresses), plus Google Maps, geolocation, and image/document pickers for Customer/Rider address selection, store/location search, and navigation.
- Designed a custom Razorpay SDK payment flow for UPI, cards, wallets, and saved payment methods, handling payment-state management, UPI-app detection, and deep linking.
- Kept client and server state consistent for cart sync, merge-cart workflows, coupon validation, and order lifecycle using Zustand with optimistic updates and server-state reconciliation.

TechKareer — Bengaluru

SDE Intern — *Jan 2026 – Mar 2026*

- Connected 3 external APIs (Kalshi, Polymarket, Notion) to deliver real-time market data, analytics, and API-driven blog content.
- Built Playwright/Selenium web scrapers that extract **100s of job listings in one go**, plus a Chrome extension for live crypto-price tracking.
- Optimized PostgreSQL schemas and queries for production features, and implemented Open Graph metadata in Next.js to improve SEO.

Tata Consultancy Services — Noida

Assistant System Engineer — *Sep 2024 – Nov 2025*

- Resolved application issues across the SDLC in an Agile team through development and debugging.
- Collaborated with cross-functional teams to investigate issues, implement fixes, and support reliable software releases.

Projects

StackSearch | *Node.js, TypeScript, Python, LangChain, React.js, MongoDB, FAISS* — **Jan 2026 – Present**

- Achieved **sub-100 ms retrieval** over **2,500+ documentation pages** across **10+ frameworks** by building the retrieval backend of a RAG-based semantic search engine: embedding generation and FAISS vector indexing.
- Reached **>80% answer relevance** in manual evaluation across **50+ test queries** by pairing Gemini (via LangChain) with source-aware prompting and inline code examples.

AegisSRE | *TypeScript, Next.js, Mastra AI, Qdrant, Enkrypt AI, Node.js* — **Jul 2026 – Present**

- Automated incident triage and remediation with a **5-agent** workflow (Coordinator, Diagnosis, Planning, Execution, Verification).
- Authored a reusable TypeScript SDK (unified client API) for external apps to report runtime incidents and track autonomous remediation.
- Architected a pluggable Runbook Registry and Sandbox Runtime for safe, deterministic, policy-driven remediation across infrastructure and application environments.

Achievements

- **Multi-Hackathon Winner:** Secured Winner/Runner-Up titles at 8 national and international hackathons, including **1st Runner-Up** at Build on Aptos (Consumer Apps Track) and **1st Runner-Up** at Hack This Fall.
- **Global Top-10 Finalist, TON Open Hack (Dec 2025):** Developed *LocalPay*, a Next.js instant Web3 Telegram checkout for local merchants with auto-stablecoin settlement, simulated TON payments, and AI-driven merchant insights.
- **Global Rank #68, GirlScript Summer of Code 2023:** Contributed **29 merged open-source pull requests**.

Education

Jamia Millia Islamia, *B.Tech in Computer Engineering* — *New Delhi | Dec 2020 – Jun 2024*
